Designing the Oracle Store with Oracle Application Express

Marc Sewtz | Software Development Manager | Oracle Application Express Oracle USA Inc.

540 Madison Avenue, New York, NY 10022 marc.sewtz@oracle.com

The following is intended to outline Oracle's general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described for Oracle's products remain at the sole discretion of Oracle.

Agenda

- Oracle Application Express Overview
- Oracle Store Overview
- Web Presentation Techniques
- Oracle APEX User Interface Design
- Designing and building the Oracle Store UI

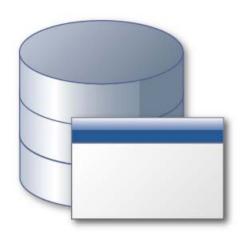

Oracle Application Express

Overview

Oracle Application Express Overview

- Unique Rapid Application Development (RAD) tool for the Oracle Database
- Browser based for Development, Deployment and Use
- Allows to declaratively build professional
 Web 2.0 applications that are fast and secure
- Leverages full Oracle database capabilities and existing SQL & PL/SQL skills
- Standard component of the database
- Fully supported, "no-cost" option with all editions of the Oracle Database

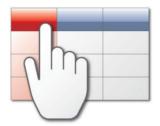

Easy to develop • Easy to deploy • Easy to manage

Oracle Application Express Overview

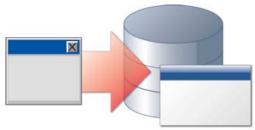

Data-driven Applications

Develop opportunistic and departmental productivity applications

Online Reporting

Build SQL-based reporting applications on existing database schemas

Oracle Forms Modernization

Leverage SQL & PL/SQL declarative programming skills to move Forms applications to HTML / Web 2.0

Spreadsheet Web-ification

Convert spreadsheets to Web applications where they can be concurrently viewed and edited

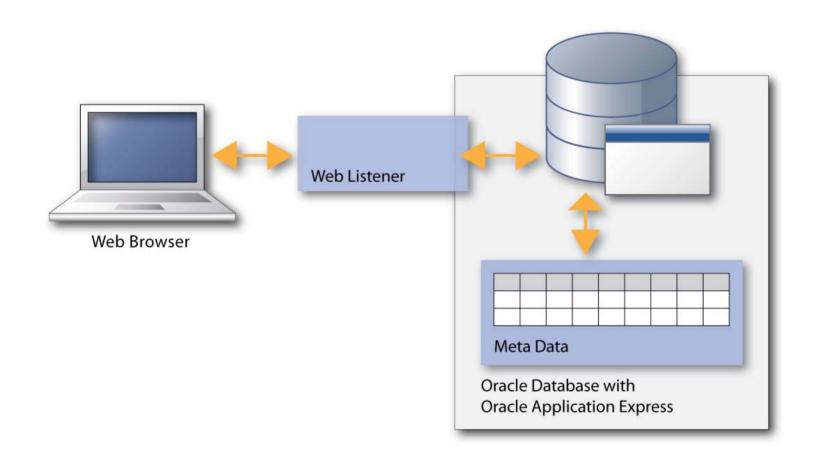

Access Replacement

Consolidate outgrown Access applications to the Oracle database with an APEX Web front end

Oracle Application Express Overview

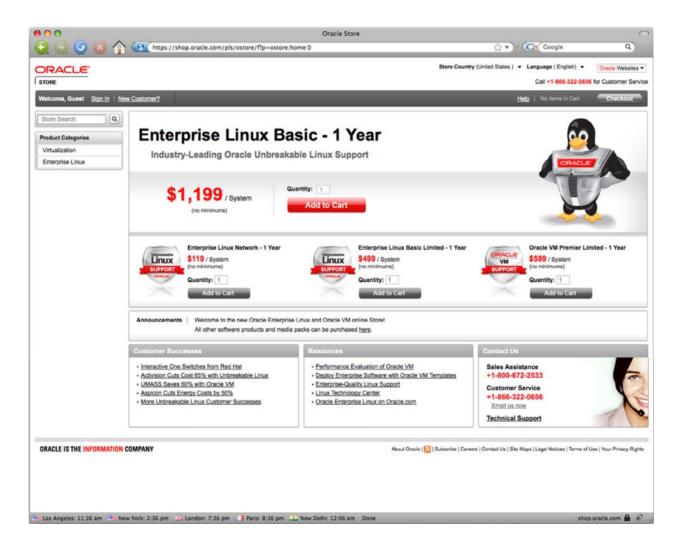

Oracle Store Overview

Oracle Store Overview

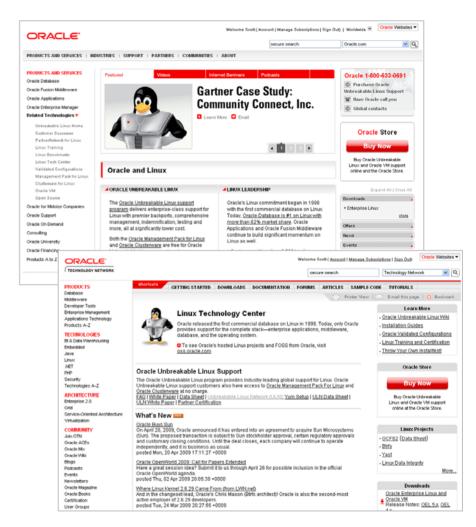

- Online Store launched in April 2009
- Intuitive user interface
- Incorporates best practice e-commerce capabilities
- Multilingual
- Multicurrency
- Current product categories:
 - Oracle Enterprise Linux
 - Oracle VM
 - ... more to come

Oracle Store Homepage

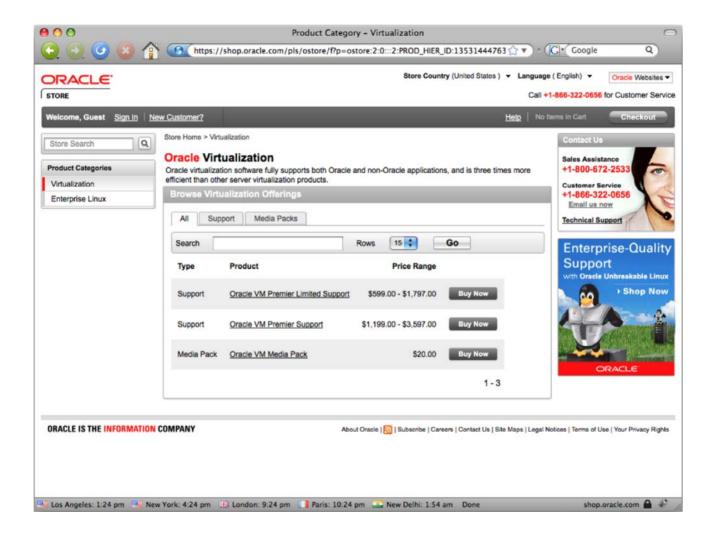

Oracle Store – Search, Adverts, Banners

Oracle Store – Product Information

Demonstration

Oracle Store

XHTML

- Extensible Hypertext Markup Language
- Conforms to XML syntax, same depth of expression as HTML
- Three formal DTDs for XHTML 1.0
 Corresponding to the three different versions of HTML 4.01:
 - XHTML 1.0 Strict (equivalent to strict HTML 4.01) includes elements and attributes that have not been marked deprecated in the HTML 4.01 specification
 - XHTML 1.0 Transitional (equivalent of HTML 4.01 Transitional) includes the presentational elements (such as center, font and strike) excluded from the strict version
 - XHTML 1.0 Frameset (the equivalent of HTML 4.01 Frameset) allows for the definition of frameset documents

CSS

- Cascading Style Sheets
- Separation of the content of a web page from its presentation
- Colors, fonts, alignment, layout, etc are defined in a CSS file rather than in the directly in the HTML/XHTML document
- Allows for presenting page content in different styles
- Content readable on a variety of different devices including screen readers

- Table-less Web Design
 - Web design without using HTML tables for page layout
 - CSS are used to arrange elements
 - CSS Introduced by the World Wide Web Consortium (W3C) to:
 - Improve web accessibility
 - Make HTML code semantic rather than presentational
 - Bandwidth Savings
 - Easier Maintainability
 - All of the layout information resides in one place
 - Layout changes without adjusting HTML page

Oracle APEX User Interface Design

Oracle APEX User Interface Design

Themes

- Collections of templates that define the layout of an application
- Accommodate every UI pattern that may be needed
- Organized by type (breadcrumb, button, calendar, label, list, page, popup list of values, region, and report)
- Template classes identify the purpose of the each template within a type
- Quickly change entire look and feel of an application

Oracle APEX User Interface Design

- Page Layout
 - Pages rendered by combining page template and data
 - Page template defines page structure
 - Navigational Components
 - Level of Tabs
 - Sidebars
 - Page content defined in regions
 - Page can have any number of regions

Demonstration

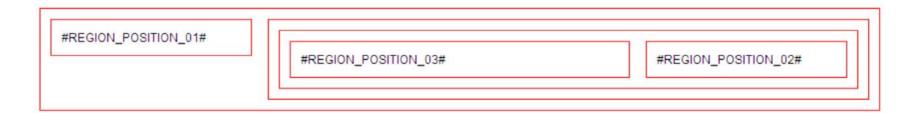

Oracle APEX Templates and Themes

Designing and Building the Oracle Store User Interface

- Initial Mock-Ups using Photoshop
 - Using Layers to mimic HTML page structure
 - Re-use layers to create mock-ups for different pages
- Photoshop images transformed to static HTML
- New Oracle APEX theme created based on static HTML

Page Structure

Rounded Corner Regions

Sample Region

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

```
<div class="region"><div>
 <h2>Sample Region</h2>
 Lorem ipsum dolor sit amet, consectetur adipisicing elit,
 sed do eiusmod tempor
 incididunt ut labore et dolore magna aliqua.
</div></div>
.region { background: url(bg-menu.gif); margin: 8px 0 0;
 overflow: hidden; width: 183px; }
.region div { background: url(bg-menu-b.gif) no-repeat 0 100%;
 padding: 0 0 4px; }
.region h2 { background: url(bg-h3.gif); margin: 0;
 width: 183px; height: 26px; overflow: hidden; line-height: 26px;
 text-indent: 11px; font-size: 11px; color: #000; }
```

Category Menu using CSS Sprites

```
Product Categories
<div class="menu">
                                                  Virtualization
  < div>
                                                  Enterprise Linux
    <h3>Product Categories</h3>
    <111>
      <a href="/virtualization">Virtualization</a>
      <a href="/linux">Enterprise Linux</a>
    </div>
</div>
                            bg-nav.gif
.menu a { background: url(bg-nav.gif) no-repeat 0 -22px;}
.menu .active a, .menu a:hover {
 background: url(bg-nav.gif) no-repeat 0 0;}
```
