4

In the Beginning Was EBS

- E-Business Suite (Oracle Applications) needed a lightweight client interface
 - Oracle created UIX for this
- User Interface XML (Extensible Markup Language)
 - First supported in JDeveloper 9i
 - Became “ADF UIX” in JDeveloper 10g (10.1.2)
 - UIX support dropped out of JDev 10.1.3
 - Set of *components*
 - Tag language (e.g., af:inputText)
 - Used to build UIs (e.g., for web applications)
 - Concurrent with JSP in the industry
 - Still used in EBS through R12
 - 9i version of UIX, not the 10g version

And UIX Begat ADF Faces

- Application Development Framework (ADF) came upon the land
 - Formalized first in JDeveloper 10g
 - Introduced specific ADF frameworks
 - ADF Business Components (formerly BC4J)
- JSF had become a Java standard
 - Not in the EE editions, but an industry trend
- Oracle converted UIX components to the JSF standards
 - And called it “ADF Faces”
 - And it was good.

And ADF Faces Begat ADF Faces RC

- Oracle released ADF Faces (non-RC) to open source Apache Project
 - Called “Trinidad” (part of MyFaces)
 - myfaces.apache.org/trinidad
- Oracle created ADF Faces Rich Client
 - Introduced in JDeveloper 11g
 - Concurrent with introduction of ADF Controller (task flows)
- Oracle used it to build Fusion Applications
 - A **very** heavy investment
- And it was **very** good.

Agenda

- Who begat what?
- How rich?
- Atomic components
- Layout components
- Data visualization components
- Resources

Rich == Highly-Interactive

- Components built for interactivity
 - For example, table grid component
 - Resize columns with drag and drop
 - Reorder columns with drag and drop
 - No page refresh wait when scrolling through rows
- Support for pop-ups and dialogs
- Client-side validation
 - Property driven
 - For example, formats, ranges, and required
 - Error messages appear next to the component with a problem value

- Column grouping
- Row highlighting
- Column moving
- Export to Excel
- Detach option
- Column sorting & filtering

Demo

QUOVERA

10

Rich == Flexible

- Fully declarative AJAX support
- Built on top of JSF APIs
 - Deployable on any 1.2 implementation of JSF
- Configurable skins
 - CSS development work
 - A single property applies the skin to all components in the application
- Large range of UI items
 - 150+ components (and counting)
- Internationalization and accessibility

QUOVERA

11

Rich == Easy To Use

- Property-driven components that save development effort
- Layout components to arrange other components
- Data Visualization Tools (DVT) components
 - Lots of functionality with little effort
 - Chart, Gantt, Pivot Table, Map, Hierarchy Viewer, Gauge

Really rich!

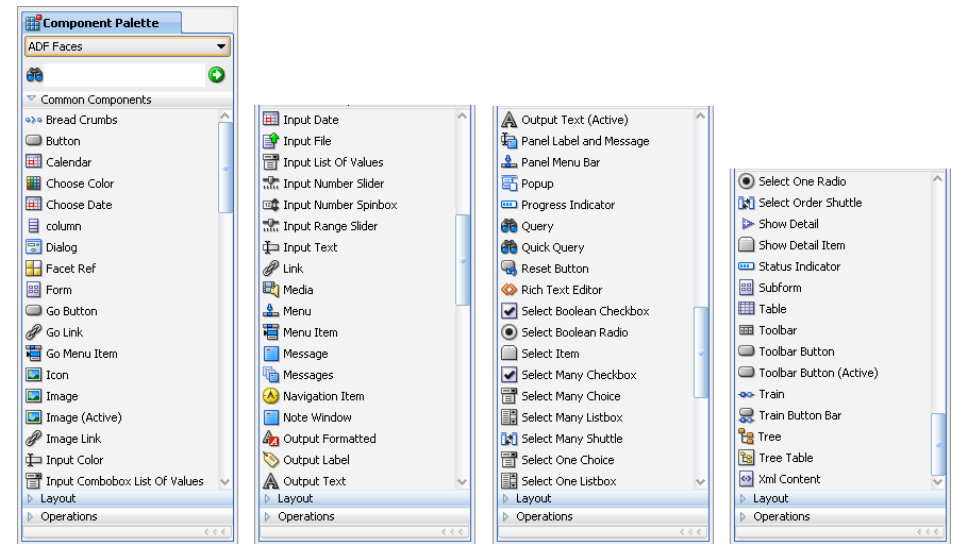

QUOVERA

12

Atomic Components

- Most are on the Common Components page of the Component Palette

Some Atomic Components

The image is a collage of various Java Swing components and their corresponding AWT/JavaFX classes. It includes:

- af:inputText**: A text field containing the value "198" and a "Last" button.
- af:inputListOfValues**: A text field with the label "Department" and the value "50".
- af:menuItem**: A menu item labeled "Help" with a sub-menu containing "Using the application" and "About TUHRA".
- af:inputDate**: A date field showing "6/21/1999" with a calendar icon.
- af:selectOneChoice**: A search dialog titled "Search and Select: Department" with various filters and a list of departments.
- af:selectOneChoice**: A job selection list with "Shipping Clerk" selected.
- af:selectBooleanCheckbox**: Three boxes of Chex cereal.

af:selectManyShuttle

- Single component for multiple-selection list
 - Checkmark selection or
 - Double click or
 - Select and click arrow buttons
- af prefix identifies the ADF Faces RC library

af prefix identifies
the ADF Faces RC
library

af:selectManyShuttle

Some Rich Features

- Atomic components are the main user interface items

- Features:

- Converters; e.g., number format

Convert+Number
sub-component

Pattern =
"###,###.##"

Label 1 Example format: ###,###.##
Label 2

- Validators; some are built in, e.g., required

- Messages appear next to items

*af:inputText
af:outputText
af:inputDate
af:selectOneChoice
 **Error: A value is required.**
You must enter a value for *af:inputText.

- AJAX

- Drag and drop

Required= true

RequiredMessageDetail= "You
must enter a value for {0}."

QUOVERA

17

Using AJAX in ADF Faces RC

- Asynchronous JavaScript and XML
- Partial Page Rendering (PPR) in ADF Faces
 - “Declarative AJAX”
- Much AJAX in ADF Faces is transparent
 - Built into the components
 - Nothing special needs to be done
- You can setup non-default AJAX behavior using properties
 - *partialSubmit* – used by command items
 - *autoSubmit* – used by input items/lists, etc.
 - *partialTriggers* – all components, sets up the “viewer” (listener)

AJAX provides
a **cleaner** user
interface!

19

Drag and Drop

Drag Source

Attribute sub-component;
Name = "dragSourceValue"

Attribute Drag Source sub-
component; Attribute =
"dragSourceValue"

Drop Target
Drag Source

Attribute Drop Target
sub-component; Attribute = "value"

- The value from Drag Source will be copied into Drag Target

QUOVERA

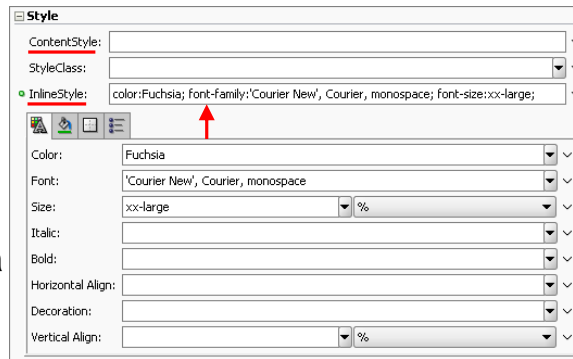

Demo

20

Modifying the Visual Aspects

- Skins
 - First and foremost – get this right
- Properties - secondary
 - *ContentStyle*
 - For data inside the component (foreground)
 - *InlineStyle*
 - Set from tab area below it
 - Or just type it in

Demo

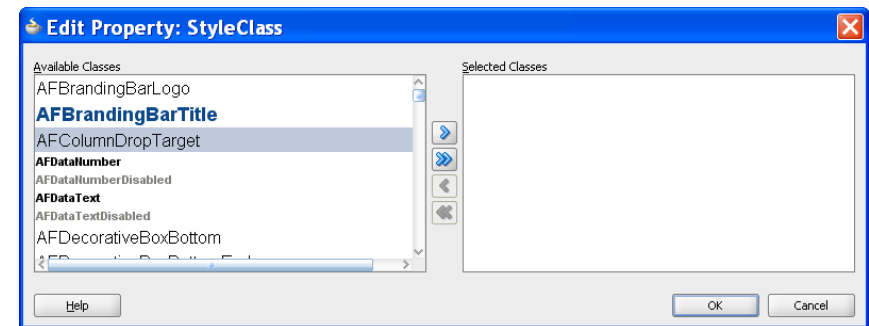

quovera

21

Another Visual Aspects Property

- *StyleClass*
 - Equivalent to the HTML *class* property
 - Apply existing style sheet selectors
 - Can apply more than one to a component

quovera

22

Agenda

- Who begat what?
- How rich?
- Atomic components
- Layout components
- Data visualization components
- Resources

quovera

23

Container Components

- Most are on the Layout page of the Component Palette
 - Use them to hold other components
- `af:panelHeaderLayout`
 - Region title
 - Stack components under it
- `af:panelGroupLayout`
 - Lay out components in a row or in a column

horizontal

vertical

quovera

24

Some Rich Features

- Allow for sophisticated layouts
 - Nest layout components within layout components
 - Virtually limitless possibilities
- *Facets* (sub-components) provide special functionality
 - For example, relative placement of components – regardless of resolution or window size
 - `<f:facet>` component
- Use `af:spacer` to fine tune placement
- Hide or display the contents using the layout component properties

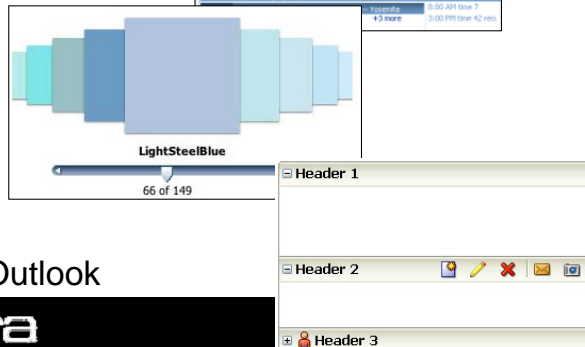

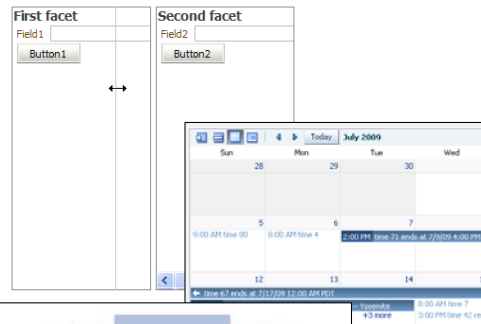

More Layout Components

- `af:panelBorderLayout`
 - Predefined layout areas
 - Uses *facets* to hold the contents of each area
 - Start, end, top, bottom (and more)
- Center area stretches its contents to fill the area

Super-Rich Layout Components

- `af:panelSplitter`
 - Split pane control
 - Optional: user can move the drag bar
 - Horizontal or
 - Vertical
- `af:calendar`
 - MS Outlook style
- `af:carousel`
 - Good for visual browsing
- `af:panelAccordion`
 - Also found in MS Outlook

Layout Tip

- Design This Container option in the pulldown menu for the layout component

Demo

- Allows you to resize container elements visually
 - This action changes the property values
- Another tip: Assign color to the borders so you can see the containers

PanelFormLayout

Narrow Field 1	<input type="text"/>	Narrow Field 2	<input type="text"/>
Medium Field 1	<input type="text"/>	Medium Field 3	<input type="text"/>
Wide Field 2 with a wrapping label	<input type="text"/>	Wide Field 3	<input type="text"/>

- Lay out fields in rows and columns
 - Perfect for most input forms
- Right justifies prompts
- Left justifies fields
- Tab order is down the first column, then across to the second column
 - Not necessarily intuitive; workaround:
 - Multiple PFLs in a single vertical PGL
 - Set *fieldWidth* and *labelWidth* of the PFLs

Details in the white paper

QUOVERA

29

Achieving the Perfect Layout

- Know your container components
 - Facets are powerful things
- More
 - af:popup
 - Drop in an af:dialog or af:window
 - Drop af:showPopupBehavior into an action item (button or menu choice)
 - af:panelStretchLayout
 - Expands contained components to fill width
 - Use if another container cuts a component
 - af:menuBar
 - Panel Menu Bar
 - Creates menu area, drop in af:menu then af:menuItem
 - af:panelLabelAndMessage
 - Provides a prompt for a group of objects
 - FirstName and LastName fields with a prompt of "Name"
 - Use inside af:panelFormLayout

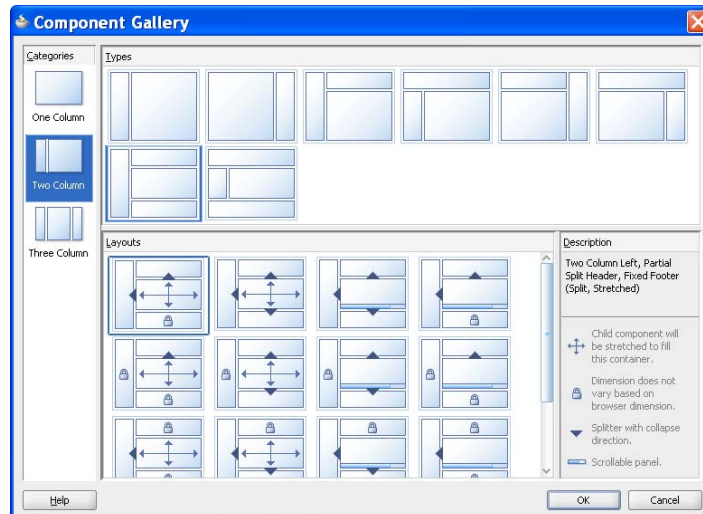

QUOVERA

30

More Perfect Layout Tips

- Design page fragments, not separate pages
- Use Quick Start Layouts when creating the page or template

Find by category.
Provides prebuilt functionality indicated by symbols and description.

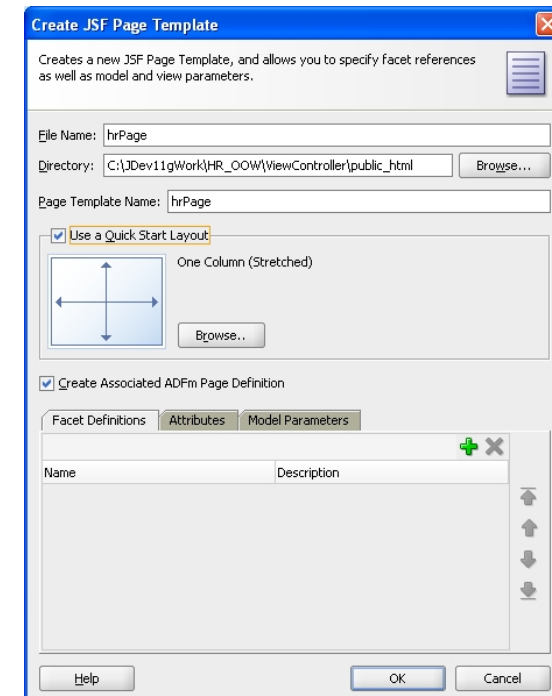

QUOVERA

31

Create Templates

- New gallery item for JSF page template
- Define facets
 - Your own layout areas
- Add attributes
 - Can transfer data from page to template
- Add container components

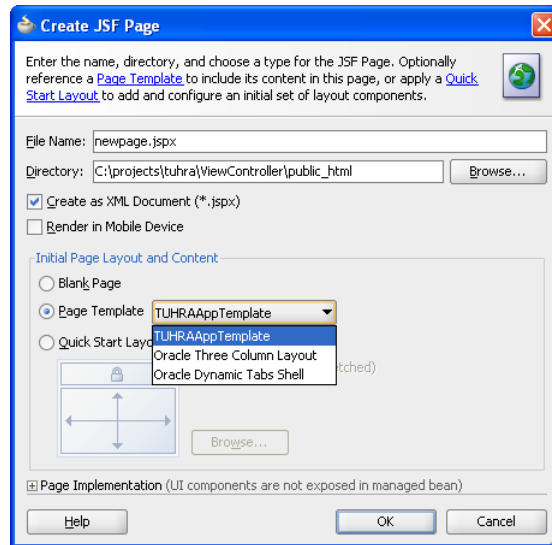

QUOVERA

32

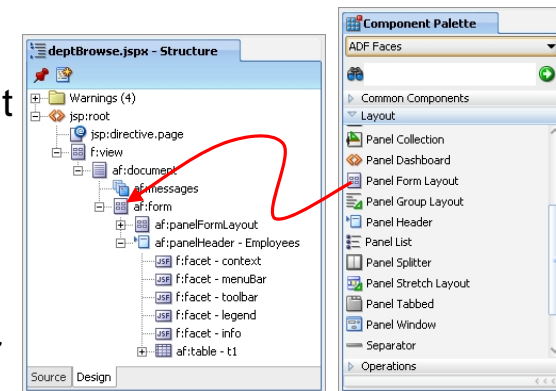

Using the Template

- Application's templates appear in the JSF Page dialog
 - Use *Page Template* pulldown
- The layout elements are referenced from the template

Tip: Drop Into the Structure Window

- Drop on top of container into which you want the component to appear
- Much more accurate
- Other options
 - Click the component after selecting the Structure window node
 - Use the bread crumbs in the editor

Agenda

- Who begat what?
- How rich?
- Atomic components
- Layout components
- Data visualization components
- Resources

DVT Components

- Data Visualization Tools are on the ADF Data Visualizations page
- Each type has its own panel with components
 - Gantt
 - Gauge
 - Map
 - Graph
 - Hierarchy Viewer
 - Pivot Table

Some DVT Components

dvt:graph

More graphs

dvt:map

dvt:projectGantt

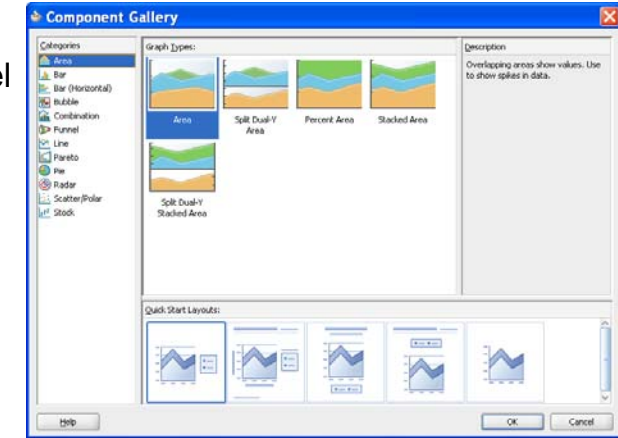

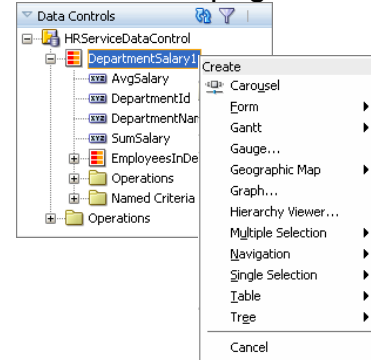

dvt:gauge

QUOVERA

37

Some Rich Features

- Rich by nature
- Connect to data
 - Drop from the Data Control panel to the page
- Select from a multitude of styles

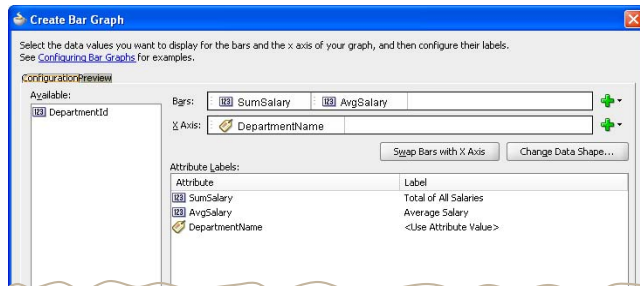

QUOVERA

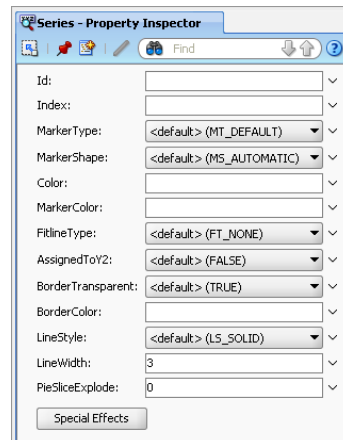

38

More Rich Features

- Specify data usage

- Control visual aspects using properties

QUOVERA

39

Other Rich Features

- Drill down capability can be mostly declarative
- Some elements of the DVT components are mouse-aware
 - For example, mouse over in the bar graph
 - Displays details about the data point

Details in the white paper

Economics 101

The rich are different
from you and me.
They have more money.

—F. Scott Fitzgerald (1896-1940),
author, and Mary McGuire Colum
(1884-1957), critic

QUOVERA

46

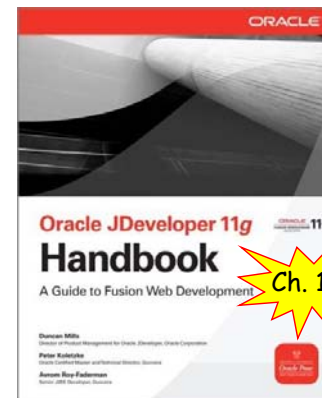

Summary

- UIX begat ADF Faces...
 - ADF Faces RC has a long heritage
- ADF Faces RC is pretty rich
 - High-interactivity, AJAX, skins, popups, dialogs, DVT, drag-and-drop
- Atomic components are mostly for interaction with users
- Layout Components provide sophisticated arrangement of components
- DVTs supply the functionality users often ask for
- There are many resources for help with learning and using ADF Faces
- And it is good.
