# Why Engineered Systems / Appliances ?

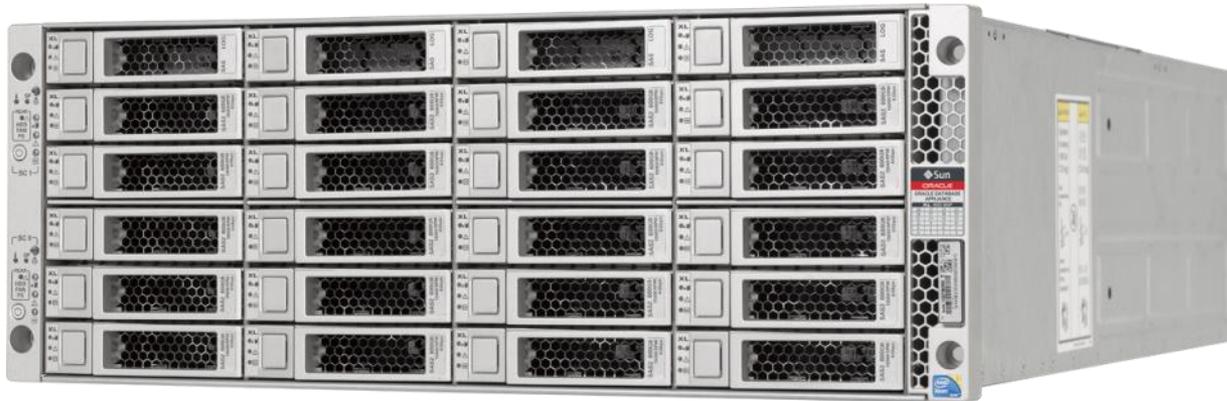

- **High Performance**
  - Fastest execution of mission critical transactions
  - Innovation delivered faster
  - Better reliability and security
- **Low Cost**
  - Shorter deployment times
  - More efficient use of HW and SW resources
  - Lower cost of management and upgrade
- **Agility**
  - Quickly adapt to changing business imperatives
  - Reduced change management risk
  - Manage spikes in demand without maintaining excess capacity

# Oracle Database Appliance – aka the ODA

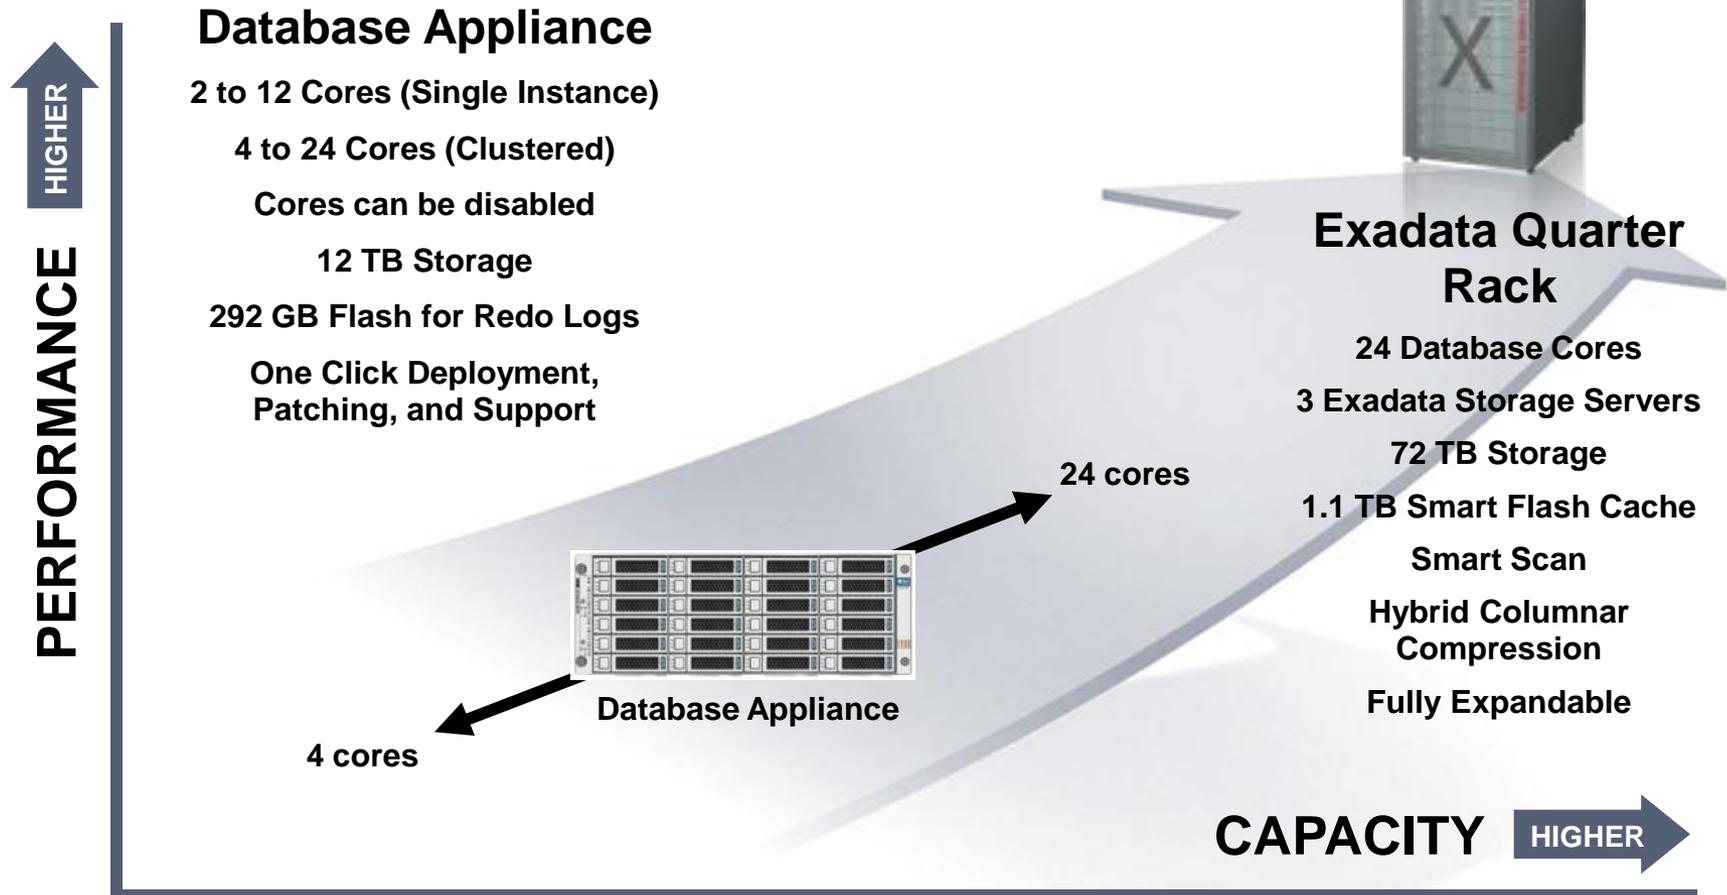

## Overview

- Simple, quick, complete, affordable, HA Cluster Database System in a single box
- Power of Oracle Engineered for Extreme Simplicity

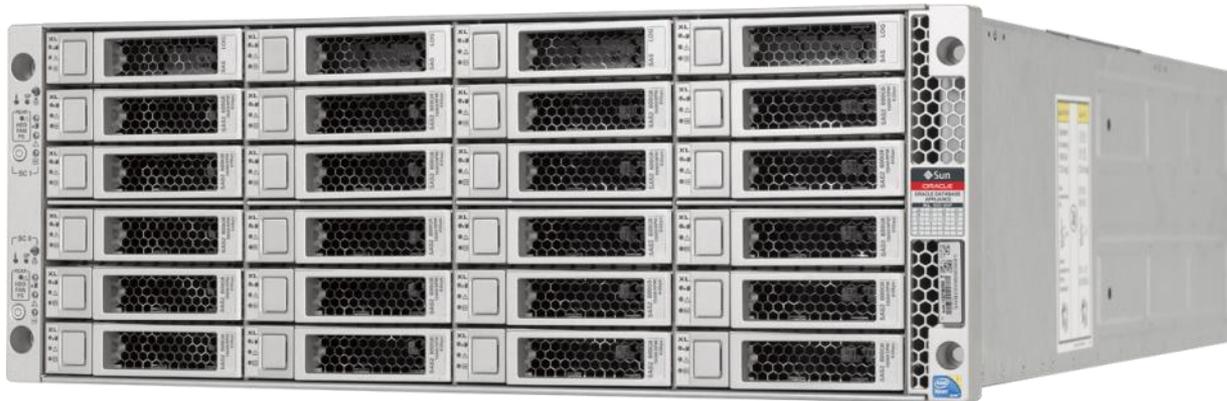

# Oracle Database Systems Family

Engineered for Simplicity

# Oracle Database Appliance

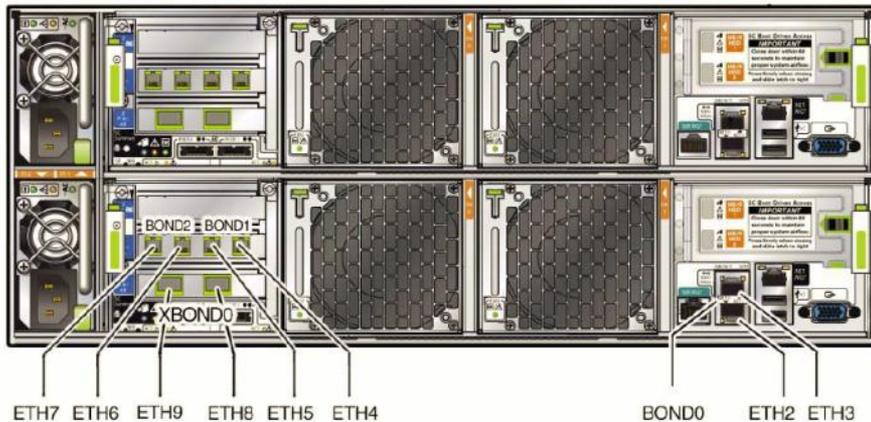

- **Extreme simplicity** – one-button implementation & patching
- **Pay-As-You-Grow licensing** – most cost-effective entry point for Oracle Database Enterprise Edition, aligns to budget cycles
- **Complete and integrated** system for Single Instance (Enterprise Edition), RAC One Node, and RAC

# Oracle Database Appliance Chassis

FRONT VIEW

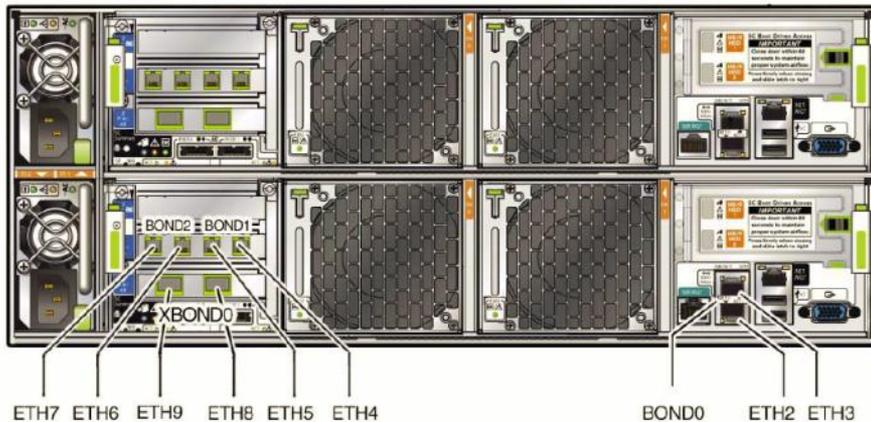

REAR VIEW

- 4U Redundant Storage Server
- 2 System Controllers (SC)
  - 2x Intel Xeon X5675 per SC (6 core, 3.06 GHz)  
"Pay As You Grow"
  - 96 GB memory per SC
  - 2x 500GB Boot Disks in back of server
  - USB flash port w/ factory image
- Shared Disk
  - 12 TB RAW, 4 TB Usable
  - 24 x 3.5" dual-ported SAS/SATA/SSD disk slots
    - 20x 600GB 15K RPM SAS
    - 4x 73 GB SSD for redo logs
  - SAS disks triple mirrored, SSD double mirrored

# Oracle Database Appliance Chassis

FRONT VIEW

REAR VIEW

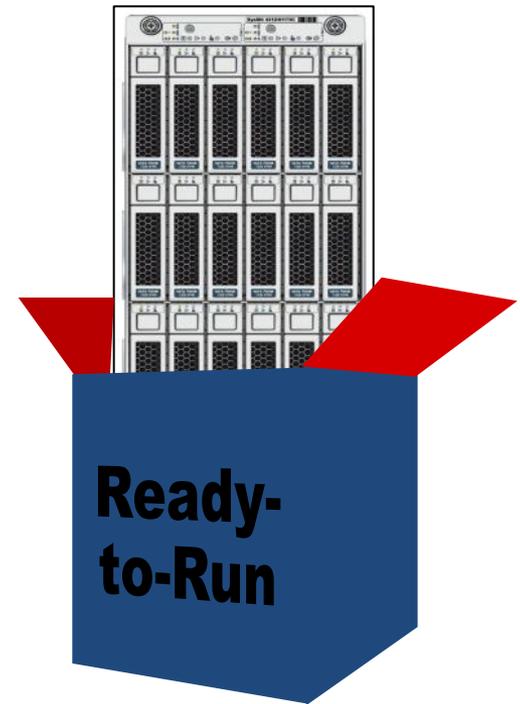

- Networking
  - 4x 1GbE (external - public) per SC
  - 2x 1GbE (external – public) per SC
  - 2x 1GbE (internal - interconnect) for SC-to-SC
  - 2x 10GbE (external - public) per SC
  - All public ports bonded into dual pairs for aggregated bandwidth and failover
  - Service Processor:
    - 1x serial, 1x 1GbE, 1x VGA per SC
- RAS Features
  - Triple Mirroring on disks
  - Redundant backplane power
  - Hot swap SN modules, fans, disks, power supplies

# ODA Hardware – Why this configuration

- Westmere 6 Core 3.06 Ghz Processors per node
  - Good balance of CPU power and core count
  - Able to configure 2 cores all the way up to 24 cores
- Triple Redundant Storage Configuration on 600GB SAS drives
  - Drives are typically delivered from the same batch which tend to fail at the same time, therefore disk failures are typically correlated
- Double Redundancy on 72GB SSD Drives
  - Less likely to fail due to no moving parts

# Extreme Simplicity

- **Easy to Implement**
  - One box: server, storage, networking
  - One button installation of software
- **Easy to manage & maintain**
  - One button patching
  - Self-managing storage
  - Auto-detects and auto-corrects
- **Easy to diagnose and support**
  - Automated Service Request filing (*phone home*)
  - Relevant logs gathered and packaged for support

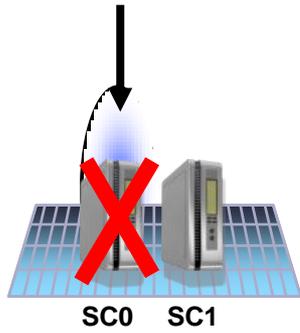

# The Full Oracle Software Stack

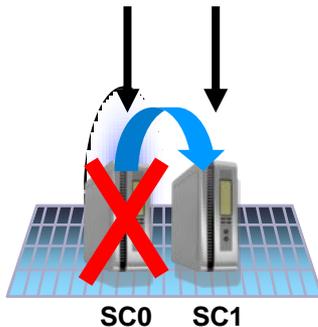

- Oracle Linux 5.5 running the standard kernel
- Choice of Oracle Database EE, RAC or RAC One Node (11.2.0.2)
- Oracle Grid Infrastructure 11g Release 2 (11.2.0.2)
  - Oracle Clusterware
  - Oracle Automatic Storage Manager
- Oracle Enterprise Manager Database Control
- Oracle Automatic Service Requests (Phone home)
- **Oracle Appliance Manager**
  - **One Button Automation for Provisioning, Patching, Diagnostics, and Storage Management**

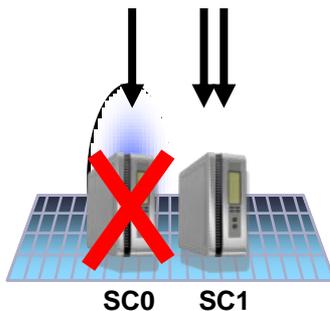

# Deployment Scenarios

- Single Instance  
**(Oracle Database Enterprise Edition)**
- Runs on one node
- Automatic restart

- Single Instance  
**(RAC One Node)**
- Runs on one node
- Passive failover on failure

- Cluster database  
**(RAC)**
- Active failover on failure

# Oracle Appliance Manager

The Secret Sauce For Simplicity

- Provides One Button functionality to easily install, manage, maintain & validate the system.
- Performs discovery of the storage subsystem.
- Monitors disks for hard & soft failures.
- Recovers ASM disk groups on shared disk failure.
- Automates procedures after remove/replace disks

# Oracle Appliance Manager

## The Modules

- Configurator Module
- Deployment Module
- Storage Management Module
- Patching Module
- Validation & Diagnostic Tools Module

***OAM simplifies and automates much of the administration !!***

# Oracle Appliance Manager

## Configurator Overview

- Hides the complexity of setting up the cluster
- GUI-based enquiry to collect configuration information
  - Cluster Name
  - Domain
  - Networking Information
  - Database Size
- Validates gathered information
- Configures OS & Networks
- Deploys the Grid Infrastructure & Database

***OAM simplifies and automates much of the administration !!***

# Oracle Appliance Manager

## Configurator Sample Screen 1

The screenshot displays the Oracle Appliance Manager configurator interface. The title bar reads "Oracle Appliance Manager". The main window has a blue header with the Oracle logo and "DATABASE APPLIANCE" text. On the left, a navigation pane shows "System Info" selected. The main area contains configuration fields: "System Name" (text input with "posales"), "Region" (dropdown with "America"), "Timezone" (dropdown with "America/Los\_Angeles"), "Database Deployment" (dropdown with "RAC"), and "New Root Password" (password input with masked characters). A "Help" button is at the bottom left, and "< Back", "Next >", "Finish", and "Cancel" buttons are at the bottom right. Two callout boxes provide instructions: one points to the System Name field, and another points to the Database Deployment dropdown.

Setup the customized System Name

System Name: posales

Region: America

Timezone: America/Los\_Angeles

Database Deployment: RAC

New Root Password: .....

New Root Password: .....

Select from three Database Deployment Configurations: RAC, RAC One Node, or Single Instance

Help < Back Next > Finish Cancel

# Oracle Appliance Manager

## Configurator Sample Screen 2

The screenshot shows the Oracle Appliance Manager interface for configuring network information. The window title is "Oracle Appliance Manager" and it features the Oracle Database Appliance logo. The "Network Info" section is active, showing a sidebar with "Network Validation" and "Summary" options. The main area contains several input fields for network configuration. Three callout boxes provide context: one for the domain name and IP, one for the node names and IP addresses, and one for the SCAN name.

**Callout 1:** VIP Name & IP information automatically generated & filled for both nodes

**Callout 2:** Node and IP information for 2<sup>nd</sup> Node is automatically generated & filled

**Callout 3:** SCAN name is auto generated

Field	Value		
Domain Name	oracle.com		
IP Address	198.27.118.2		
Node Information			
Node1-Name	Node1-IP	Node2-Name	Node2-IP
posales1	192.118.12.101	posales2	192.118.12.102
posales1-vip	192.118.12.103	posales2-vip	192.118.12.104
SCAN	Addresses	192.118.12.105	192.118.12.106
Netmask	255.255.255.0	Gateway	192.118.12.1

Buttons at the bottom: Help, < Back, Next >, Finish, Cancel

# Oracle Appliance Manager

## Configurator Sample Screen 3

The screenshot shows the Oracle Appliance Manager configurator window. The title bar reads "Oracle Appliance Manager". The main content area is titled "Database Info" and features the Oracle Database Appliance logo. A left-hand navigation pane lists "System Info", "Network Info", "Database Info" (which is selected), and "Network Validation". The main configuration area contains three fields: "Database Name:" with the value "posales", "Database Class:" with a dropdown menu set to "Medium", and "Database Language:" with a dropdown menu set to "en : English". Two callout boxes are present: one pointing to the "Database Name" field with the text "Setup the customized Database Name", and another pointing to the "Database Class" dropdown with the text "Select the Database Class type". At the bottom of the window, there are four buttons: "Help", "< Back", "Next >", and "Finish", with a "Cancel" button also visible.

# Oracle Appliance Manager

## Deployment Module

- Deploys OS, Oracle Appliance Manager, Grid Infrastructure & Database
- Configures GI & RDBMS (Oracle Database)
- Ensures correct configuration of disks & networks
- Consistent implementation of known Best Practices
- Configures optimal disk layout for ASM
- Performs initial configuration of disks & ASM DG(s)

***OAM simplifies and automates much of the administration !!***

# Oracle Appliance Manager

## Storage Management Module

- Oracle Appliance Manager Daemon (oakd) is started during boot
- Discovers storage subsystems
- Tracks configuration by storing metadata
- Monitors status of disks
- Generates alerts on failures
- Takes corrective action on appropriate events
- Interacts with ASM for complete automation

***OAM simplifies and automates much of the administration !!***

# Oracle Appliance Manager

## Patching Module

- Patching Module provides tools to patch OS, Oracle Application Manager Modules, Grid Infrastructure (GI), RDBMS
- Provides a single interface and command to patch all the components including OS, firmware, BIOS, GI, and RDBMS
- Patching Module will update the repository to reflect the newly installed patches and firmware's
- Bundle Patches for all components that is to be patched.

***OAM simplifies and automates much of the administration !!***

# Oracle Appliance Manager

## Validation & Diagnostic Tools Module

- A set of tools for validation & diagnostics
- Validation tool provides detailed information about the components – both HW & SW
- Diagget tool collects all the diagnostic information and can be used when experiencing problems.
- Healthcheck can be used to check the health of OS, DB, Clusterware, and other Oracle Database Appliance components to ensure they are health and functional optimally.

***OAM simplifies and automates much of the administration !!***

# Oracle Database Appliance Benefits

- **Rapid Deployment**
  - Deploy a highly available platform in days not weeks or months
- **High Availability**
  - Increase overall availability for applications that previously couldn't justify a costly enterprise architecture
  - Provide ZERO downtime redundancy and SLA
- **Performance**
  - Benefit from RAW device storage performance with ASM
  - Benefit from Redo Log SSD Optimization providing measurable performance increases in write heavy transactions
- **Consolidation**
  - Upgrade and consolidate any Oracle version to the ODA 11gR2
  - Consolidate to a single instance database or many independent instances.

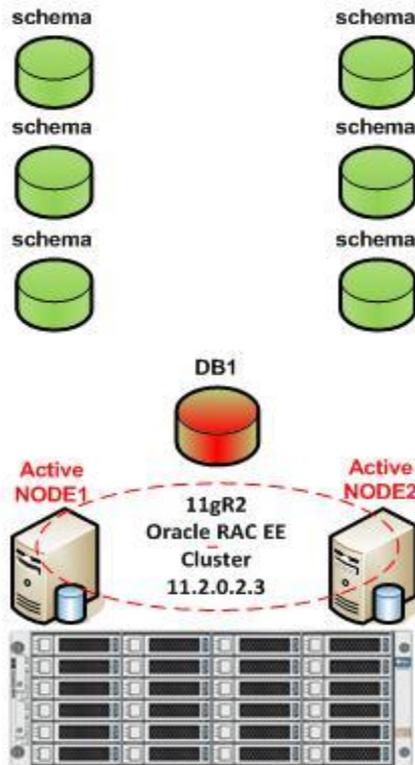

# Oracle Database Appliance Consolidation

Consolidate and Manage  
CPU Core Resources

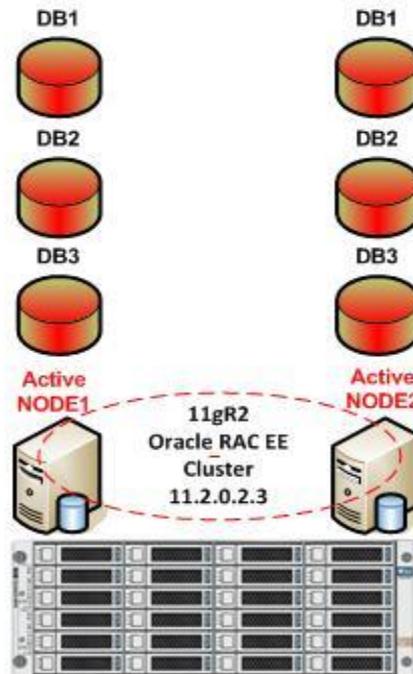

## Oracle 11gR2 Database Appliance Architecture Database Architecture Consolidation Model

Consolidate and Manage  
Storage Capacity and  
IOPs

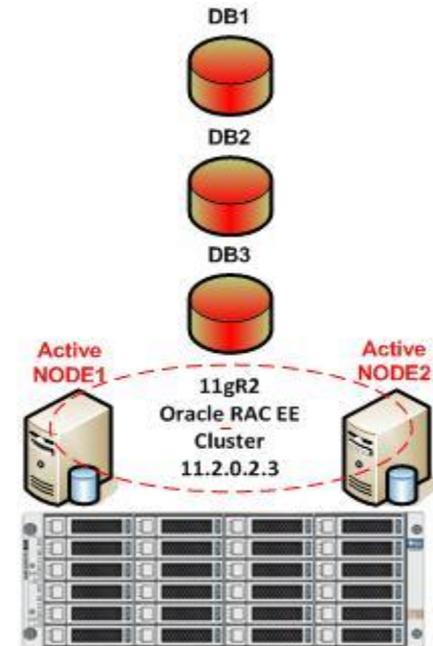

Single Physical Database  
Consolidated Applications  
Encapsulated Within  
Schemas

Physical Non-RAC Databases  
Aligned to RAC Cluster Nodes  
but Not Load Balanced

Physical RAC Databases  
Balanced across RAC Cluster  
Nodes

# Migration to the Oracle Database Appliance

- **Non Oracle Database Sources**
  - Traditional logical migration path from non-Oracle RDBMS to Oracle 11gR2
  - Using GoldenGate, Data Load or ETL tools
- **Logical Migration from older Oracle Versions**
  - Traditional Export and Import or Datapump Export and Import
- **Physical Migration paths to the ODA**
  - RMAN backup and restore for compatible platforms and Oracle Versions
- **Minimal or near zero downtime migrations**
  - RMAN & Standby Database for minimal downtime migrations
  - GoldenGate for Zero Downtime migrations

# Integrating to the real world data center

- **Backups**
  - RMAN Backups to an internal FRA
  - RMAN Backups to network location via NFS
  - RMAN Backups using Approved RMAN Agents to external tape media
  - Oracle will be publishing a WHITE LIST of approved backup agents
- **Oracle Enterprise Manager 11g or 12c**
  - Enable management and monitoring for the complete stack with Oracle Enterprise Manager
- **System Monitoring**
  - Enable Linux SNMP for external monitors such as PRTG
  - Oracle will be publishing a WHITE LIST of approved monitoring agents

# What you cannot do with the Appliance

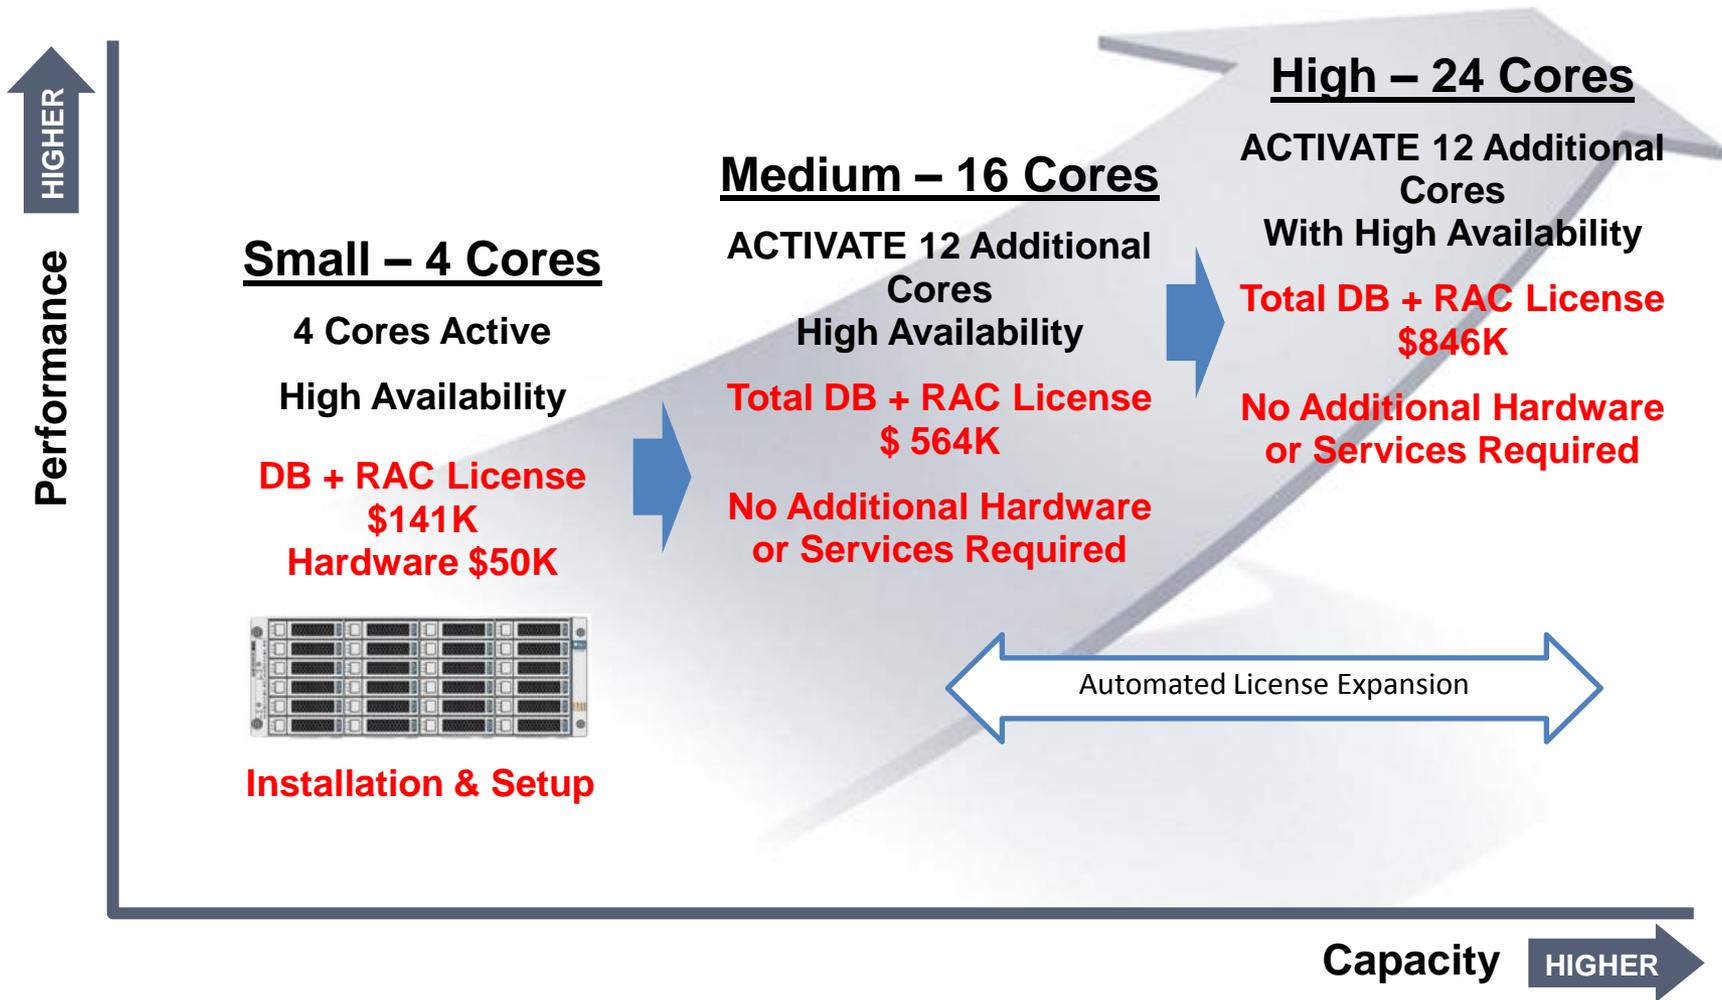

- Hardware configuration cannot be modified other than core count
- Cannot attach directly to another SAN using Fiber
  - Therefore internal storage cannot be extended for more capacity
  - However, Advanced compression can extend usable capacity to 10Tb
- Cannot change ASM level triple redundancy
- Cannot support any older version of Oracle other than 11gR2

# Oracle Appliance Manager: Core Sub Capacity

## Pay-As-You-Grow: CPU Cores on Demand Providing License Cost Control

- ***A FEATURE ONLY AVAILABLE FROM ORACLE***
- CPU cores on demand allows users to enable only the cores they need from as few as 4 cores to as many as all 24 cores (in increments of 4)
- Both system controllers must have the same number of enabled cores (Each SC has 2, 4, 6, 8, 10, or 12 cores enabled)
- System ships with all 24 cores enabled – there is no need to do anything if running at full capacity
- To configure for sub-capacity
  - Log onto MyOracleSupport
  - Declare configuration for servers
  - Download encrypted key to reconfigure servers
  - Run CLI to reconfigure server in BIOS and system will reboot
- Once configured for sub-capacity, core count can only increase in subsequent reconfigurations
- Customer responsible to ensure proper number of licenses owned

# Pay As You Grow for High Availability

Installation & Setup

# Pay As You Grow for High Availability

## Start Small HA – Pay As You Grow

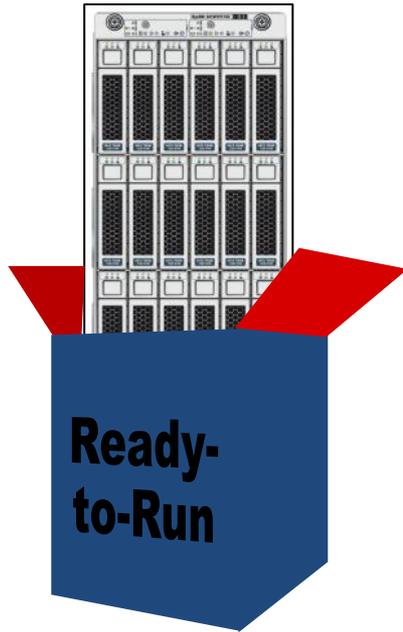

System Configuration	2 x DL380 G7 & P2000 storage (6+6 cores)	2 x R710, MD3200 & MD1200 storage (6+6 cores)	Oracle Appliance (24 cores total, 2+2 cores active)
HW Price	~\$50K	~\$50K	\$50K
DB EE + RAC License	\$423K	\$423K	\$141K
<b>Total Cost</b>	<b>\$473K</b>	<b>\$473K</b>	<b>\$191K</b>

# Oracle Database Appliance Use Cases

- Requirement for immediate deployments – from order to delivery in less than one week
- Consolidation of databases
- Standardization across Dev/Test, Prod and DR
- Data Warehousing and Data Marts
- Branch offices and Remote Data Centers
- To control Oracle costs for multi-core deployments

# Oracle Database Appliance

## Best Machine For

- Reducing Complexity
- Reducing Cost
- Reducing Risk

**EXTREME  
SIMPLICITY**

# Cintra Services for Oracle Database Appliance

- **ODA Architecture Assessment for Oracle Database Appliance Adoption**
- **ODA Quick Start Deployment**
- **ODA Database Upgrades to 11gR2 and Migration Services**
- **ODA Database Backups using RMAN**
- **ODA Grid Control Monitoring with Diagnostics and Tuning Packs**
- **ODA Disaster Site Replication using Data Guard**
- **ODA Advanced Compression for more data storage and performance**
- **ODA GoldenGate Integration and Zero Downtime Migrations**
